Fah Ladda Co., Ltd.

รักคุณ Huq Khuun

Huq Khuun is from the Northern of Thai language, which mean "**love you**"

Love you, who are consumers who deserve good quality products

Love you, who are community members who provide quality raw materials for your better life.

Vision

To Create Quality Local
Origin Products
for Happiness of Everyone

About Us

The Beginning

Ms. Suranuch Boonjun, President of the Khlongtan Organic Agriculture Social Community Enterprise (PGS) in Ban Phaeo District, Samut Sakhon Province, is the champion of the 2022 Exemplary Community Enterprise for Livelihood Award. She is driven to elevate and add value to the agricultural products of the group's members, especially fragrant coconuts, which are GI (Geographical Indication) products or Thai geographical indication products. Normally, coconut farmers are subject to prices set by coconut mills, leaving them with little bargaining power. This sometimes results in incomes that are insufficient to cover the rising cost of living. Ms. Suranuch had the idea of creating value from coconut flower sap, which is the product of male coconut flowers. This has allowed farmers to more than double their income, leading to a better quality of life. To develop the product to international standards and reduce limitations The PGS established Fah Ladda Co., Ltd. to act as a middleman for purchasing raw materials, as well as to produce and distribute coconut blossom juice and others.

Our Products

Products Made with GHP CXC 1-1969, Revision 2022 Certified Standard.

Assured Quality and Safety

Our products are manufactured in a GHP CXC 1-1969, Revision 2022 certified factory, which is an international standard for Good Hygiene Practices (GHP) in food production.

Coconut Blossom Juice

Coconut blossom juice is a natural liquid collected from the unopened flower buds of the coconut tree. Before the bud blooms and develops into a coconut fruit, it accumulates a sweet, clear liquid known as coconut blossom sap.

Low Glycemic Index 42.07

The Glycemic Index (GI) is a measure used to rank foods based on their ability to raise blood sugar levels after a meal, compared to glucose, which is the body's most easily digested sugar. GI values indicate how quickly carbohydrates in food are digested and absorbed, impacting blood sugar levels.

The glycemic index ranges from 0-100, with values less than or equal to 55 measuring a low glycemic index, values measuring medium and values greater than or equal to 70 measuring a low, high glycemic index.

COCONUT BLOSSOM JUICE

Rice Cracker

Made from Sticky Rice RD6, steamed until cooked and mixed with a secret watermelon juice recipe, then dried, fried, baked crispy, expelling oil until you get watermelon juice rice crackers that are crispy, fragrant, and delicious.
